**CONTENT**

**Who are we ?**

**DNSSEC in Alibaba Cloud**

**Thoughts and Takeaway**

# Alibaba Ecosystem

Alibaba's mission : To Make it Easy To Do Business Anywhere

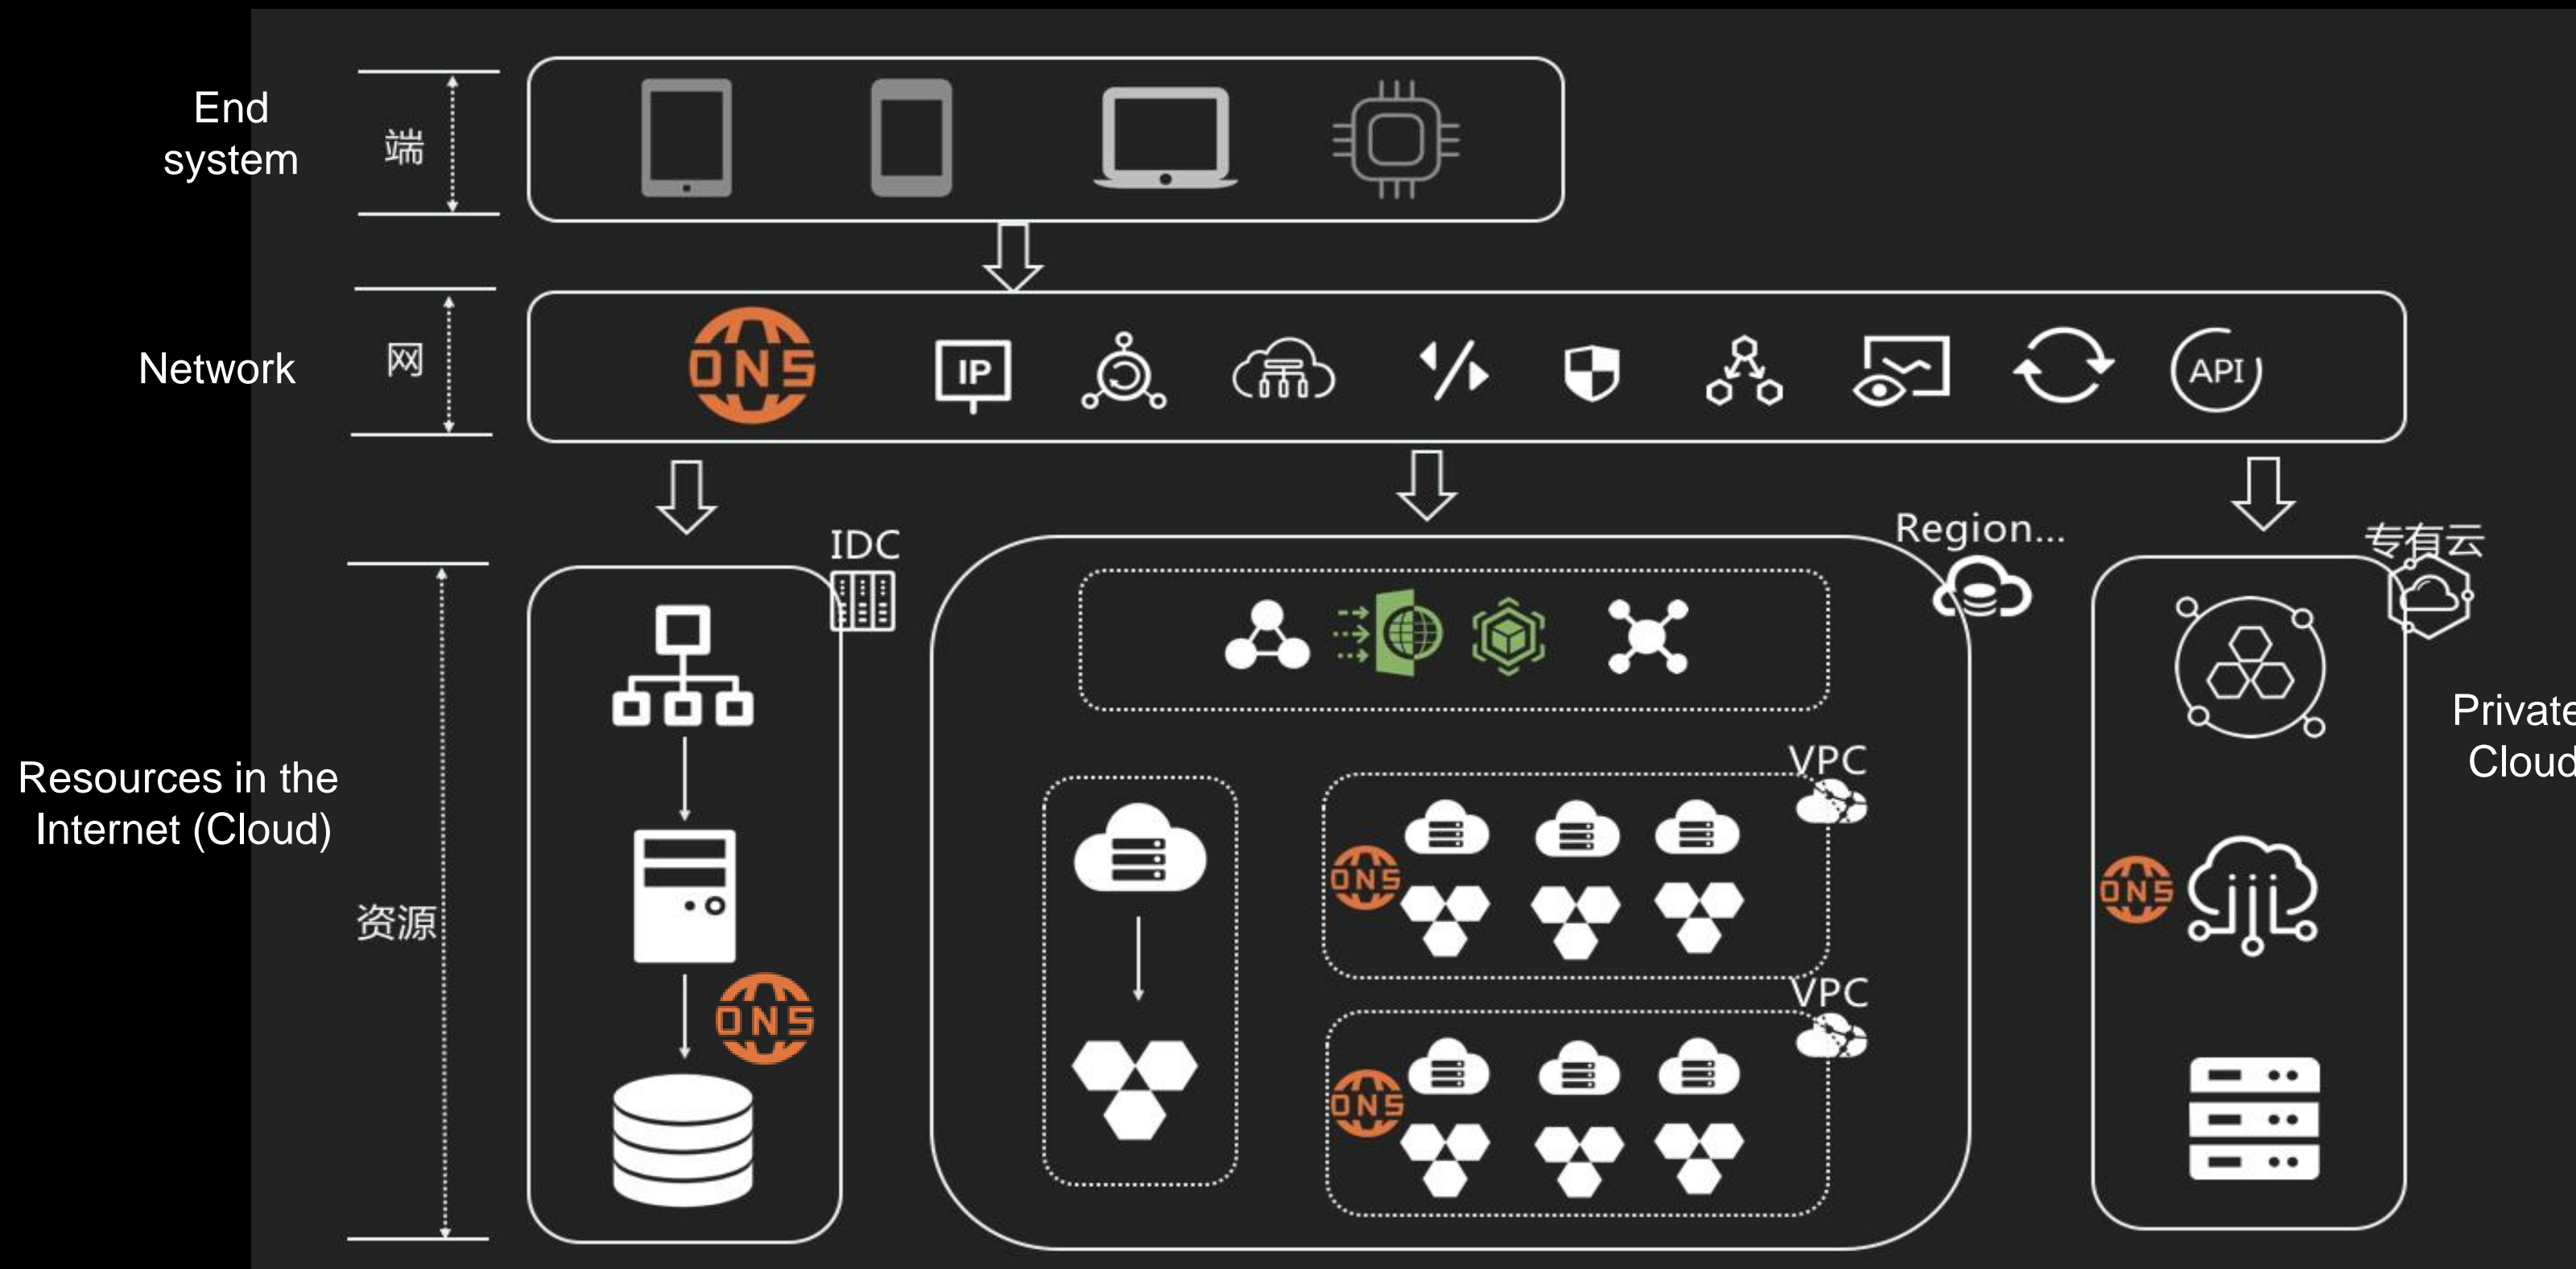

Data Create and Refuel

Trust Building

Tow numbers of 2019 "Double 11" Festival: **38.3 billion** GMV(USD), up to **544 k/s** transaction

# Alibaba Cloud DNS – the Role and Challenges

Alibaba Cloud DNS is a highly available and scalable Domain Name System (DNS) that provides authoritative DNS servers and DNS management services.

## Challenges

### Huge size and scale

(Serve ~1 billion users, 700 billion queries per day (RNDS+ADNS) , serve 20 regions and Millions VMs)

- High Performance (QPS)
- High availability (SLA)
- Accurate traffic scheduling and load balance (multi-policies)

So it is **very prudent** to deploy new technologies considering HA and risk management

# What we do DNS in Alibaba Cloud

Provide Managed DNS and GEO DNS in various networks and scenarios

Domain  
name  
Resolution

Managed DNS / Authoritative DNS  
Hosting **20 million** zones

Private  
Zone

Inner DNS for VPC  
**10,000** PVT-Zones

GTM

Global traffic Management  
for failover and recovery

ASD

ASD (Apsara Stack DNS)  
DNS in Private Cloud

**Alibaba Cloud DNS is the largest DNS provider in Asia**

# More Capacities

Alibaba Cloud DNS developed the advance services based on customers' requirements

IPv6

Authoritative DNS in June 2018

Public DNS in Oct 2019

# Concerns and Challenges on DNSSEC

## Issues on DNSSEC adoption status and value added

- DNSSEC is not fully deployed in DNS resolvers globally
- Names of Large Internet companies, google.com, facebook.com, apple.com, amazon.com has not been signed today
- DNSSEC only provides authentication of data integrity, not a full solution against DNS hijack

## Issues on implementation and operation

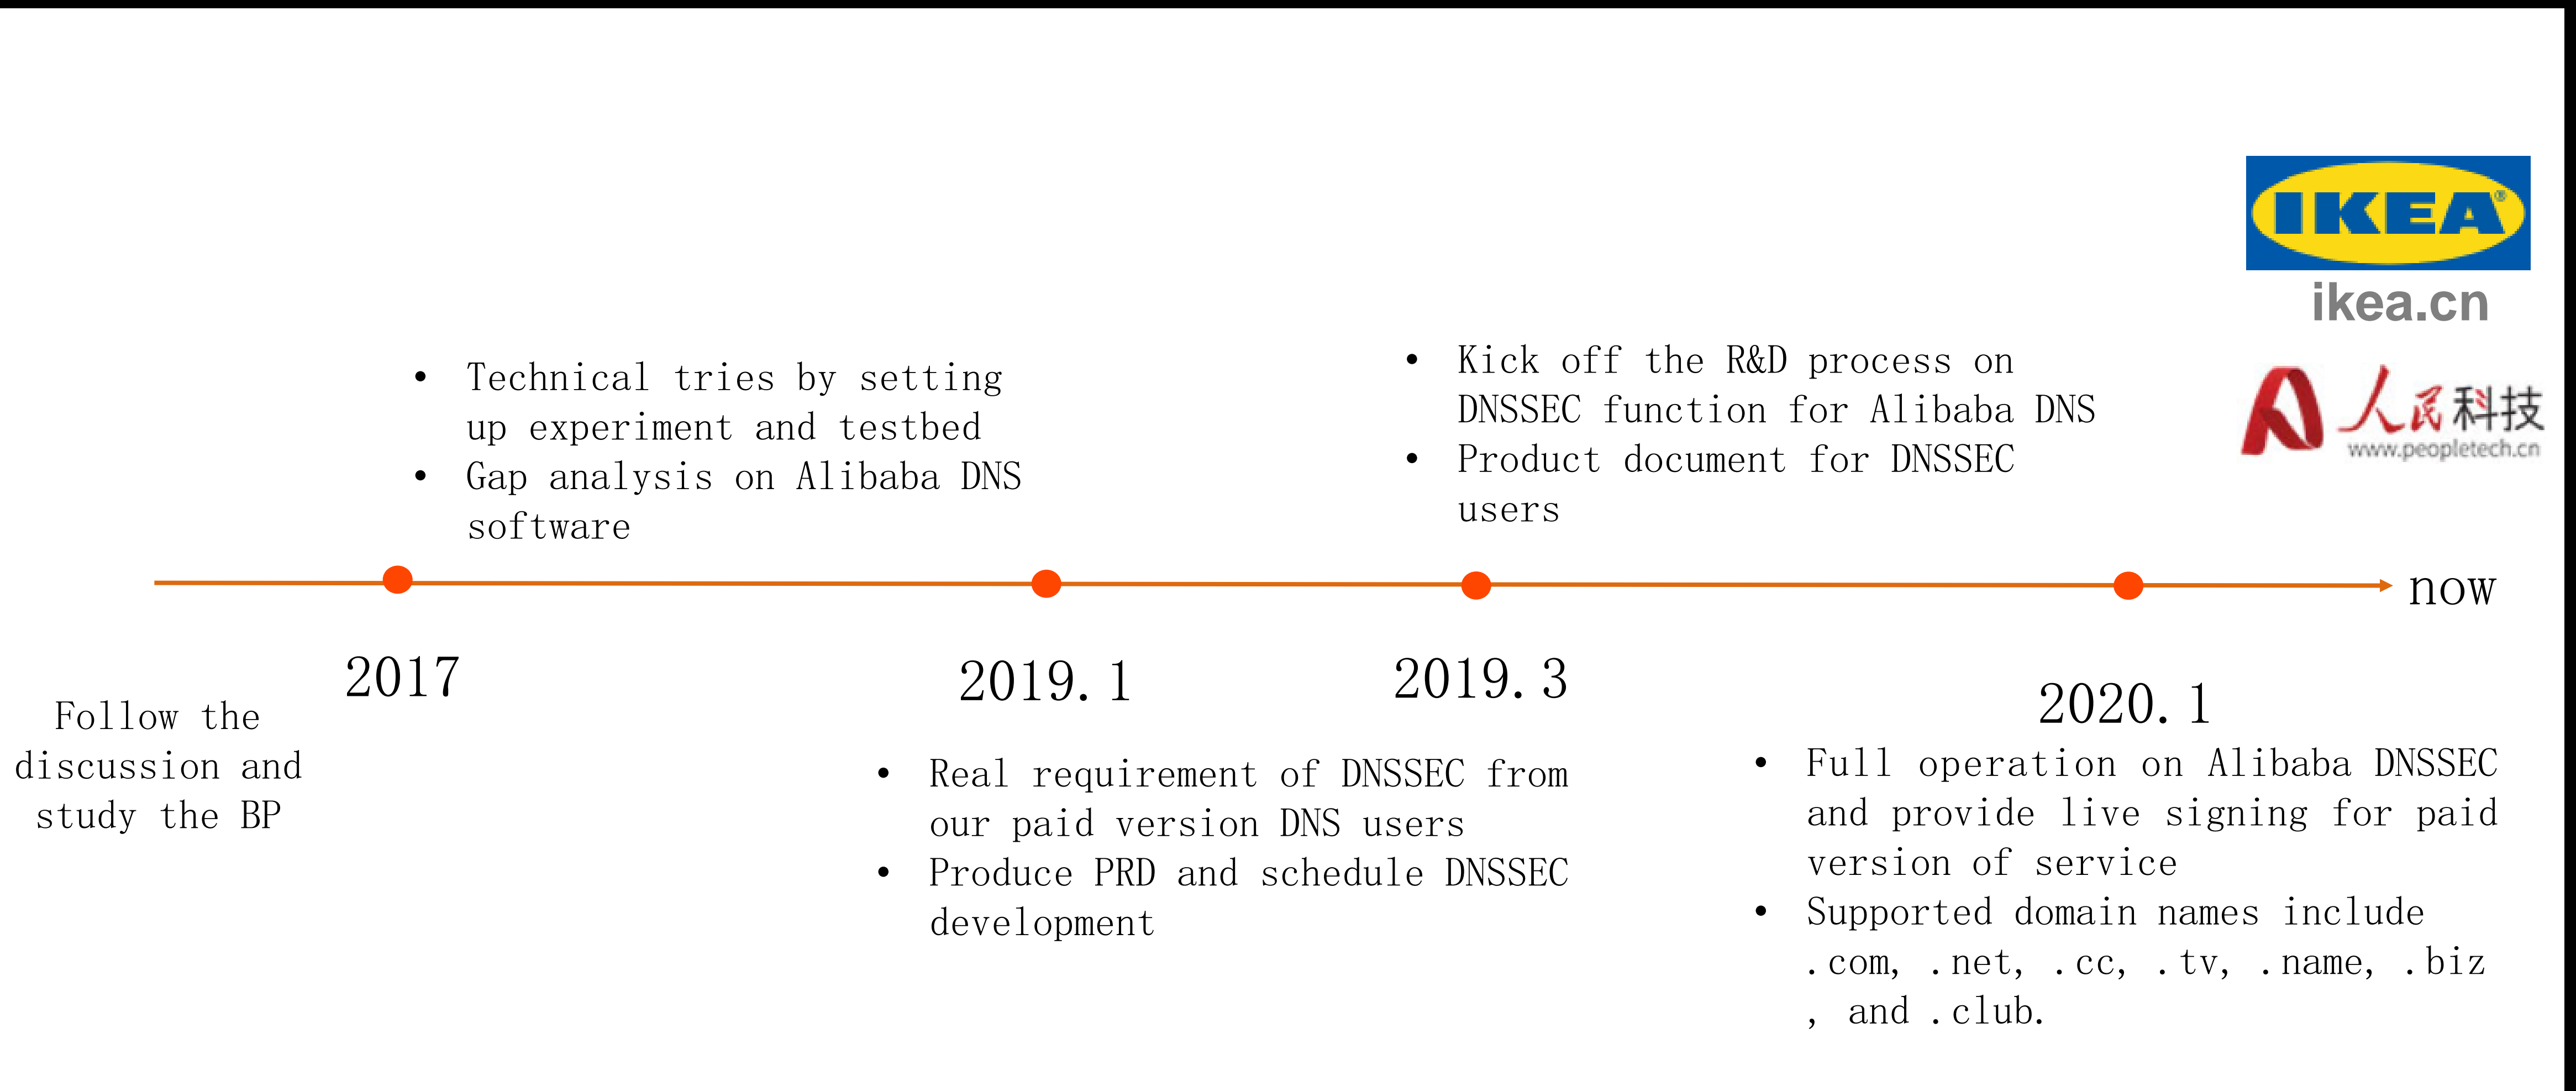

- DNSSEC Signing at Scale - lack of experience and know-how
- Integration of existing infrastructure - Impact and risk control
- Concerns on Poor Performance of DNSSEC signing – Require extra investment on the existing system

# Two Reasons to deploy DNSSEC

- From the business sense, customers ask for DNSSEC and our rivals start to deploy DNSSEC
- From the technical sense, DNSSEC provides a check for data integrity. It adds value to the domain and DNS as an Internet authoritative directory

# History of DNSSEC in Alibaba Cloud

# Configure DNSSEC in Alibaba DNS

1. The login [Cloud resolution DNS console](#), and follow the guide to DNSSEC setting page and click the button

## DNSSEC

Domain Name System Security Extensions (DNSSEC) allows you to protect your domains names against DNS spoofing and cache pollution. DNSSEC uses digital signatures to ensure the authenticity and integrity of DNS responses. It provides optimal security and ensures that users accessing your core business over the Internet are not redirected to other addresses. [View Details](#)

Enable DNSSEC

2. Copy DS record information such as Key Tag, Algorithm, Digest Type, Digest, and then add a DS record to the domain registrar.

Alibaba Cloud DNS > User Guide > Configure DNS Security Extensions

Configure DNS Security Extensions

Last Updated: Apr 26, 2020

**DNSSEC**

Alibaba Cloud DNS / Manage DNS / DNS Protection

**DNS Protection dns-example.xyz**

DNS攻击防御 DNSSEC

DS Record:

dns-example.xyz. 3600 IN DS 54931 13 2 E2E5F65EA6217B0C9D0991D8C709BD37CFD558435198453B178C88381E2903C3

Before you can use DNSSEC, you must register a DS record with the domain name registrar by using the following information.

Key Tag:	54931
Algorithm:	13
Digest Type:	SHA256
Digest:	E2E5F65EA6217B0C9D0991D8C709BD37CFD558435198453B178C88381E2903C3

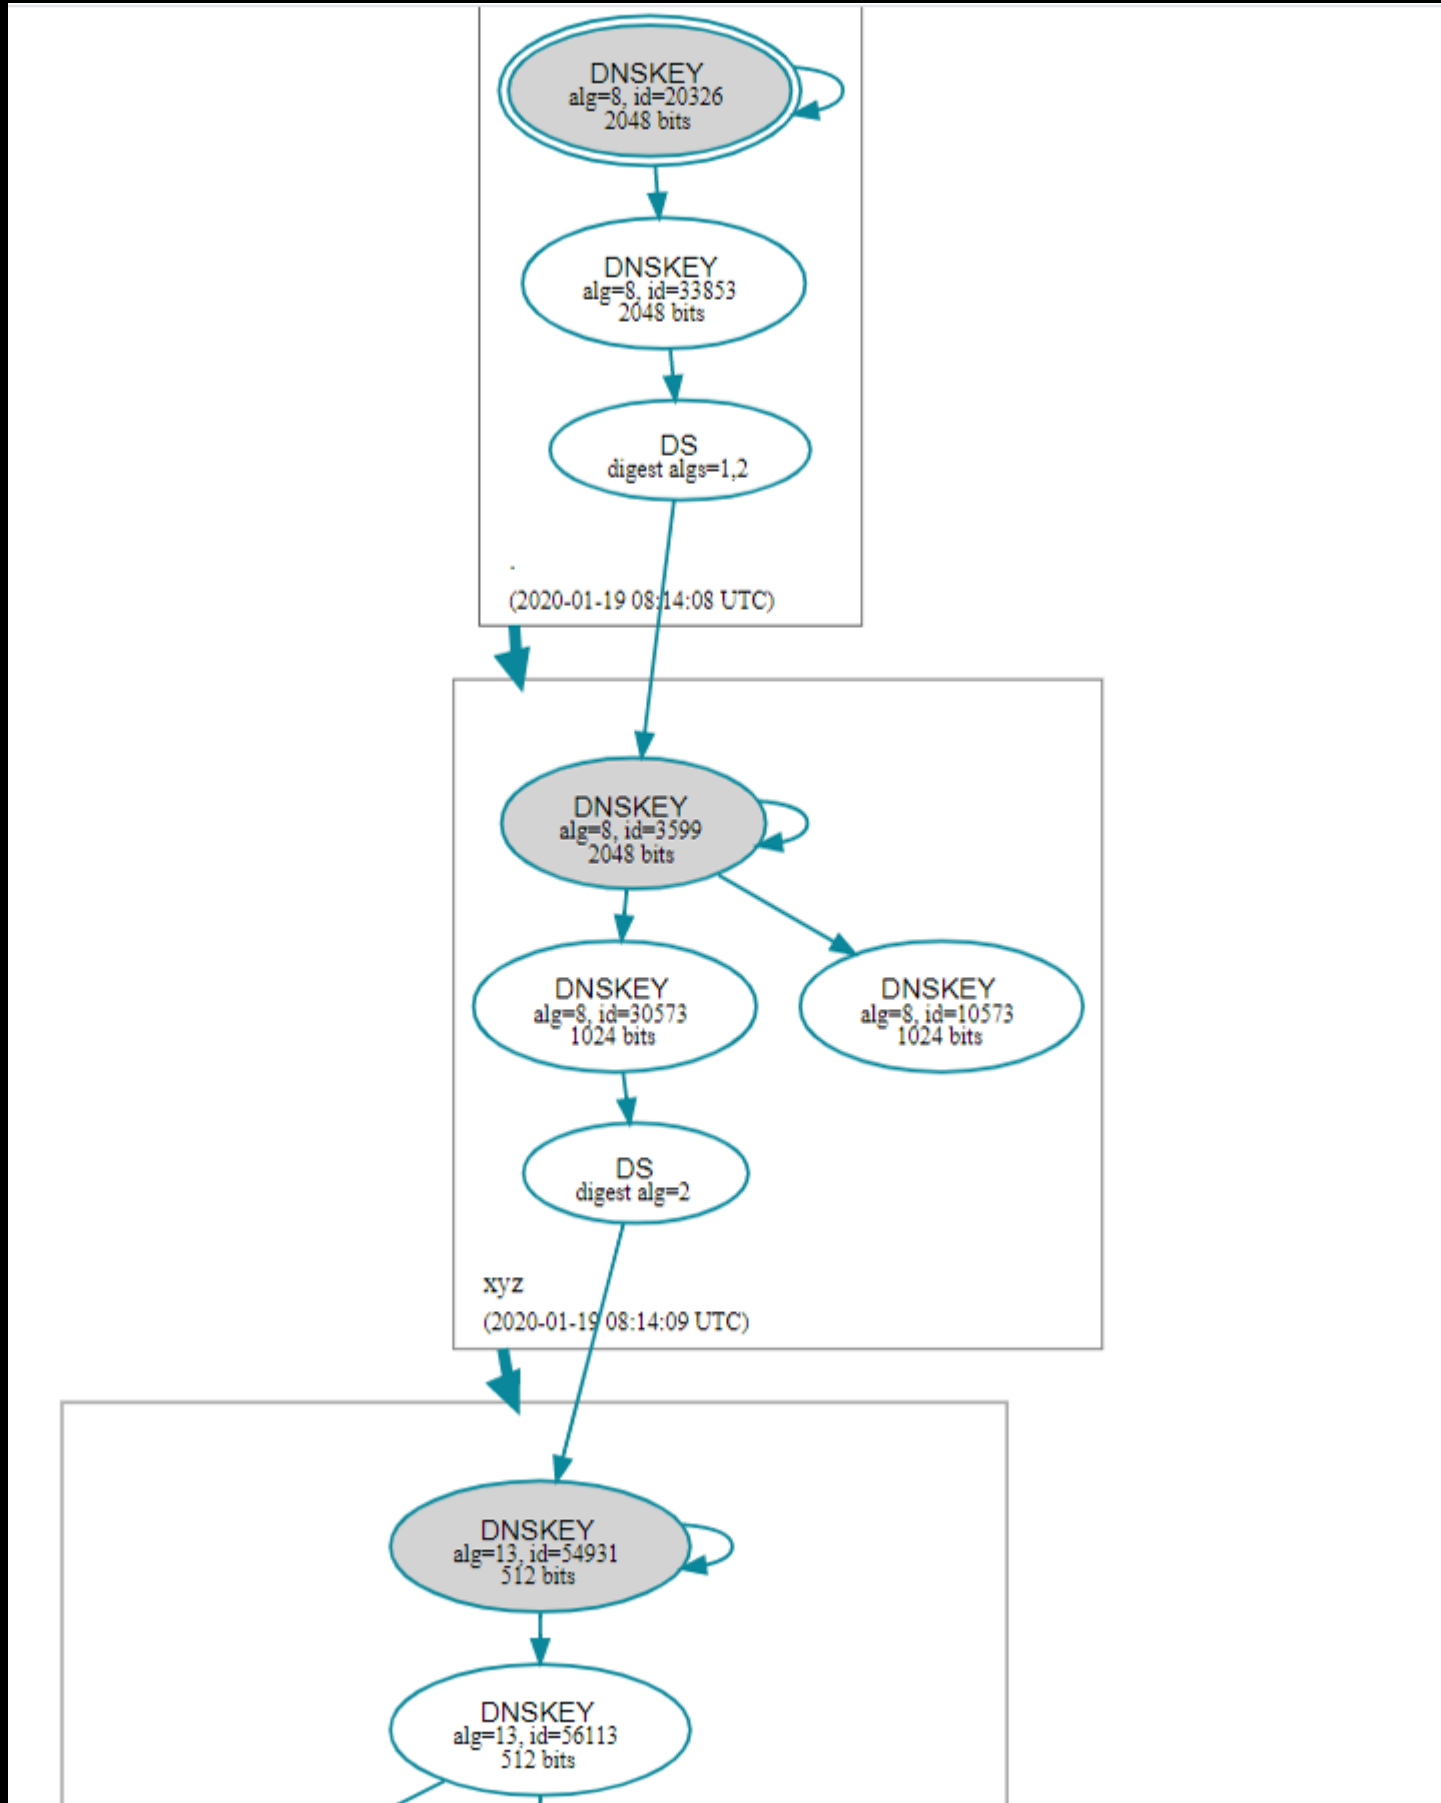

More Information about DS Record

Public Key:	kR+upPaKTGMu7KE9aUris8Y/AERcgAnPllg/wamg9le411ah9a6eOgfbfkWVz/OcmBPYtnhiQ62NPrOUuKm4Hg==
Flags:	197, KS, S, ...

# DNSSEC effectiveness test method

Recommend [dnsviz.net](https://dnsviz.net) to Check whether DNSSEC is on or not

DNSSEC active

DNSSEC inactive

# Technical overview in one slides

- **Live signing for zones which enable DNSSEC**
- **Deploy ECDSA P256/ SHA256**
  - ECC has smaller keys/signature, faster signing and better key strength
- **NESC for negatives**
- **Global ZSK and KSK**
- **Alibaba's KMS for Key management**
- **Key Pre-publish for ZSK rollover – to reduce the time of live signing**

Acknowledgement to Cloudflare's best practice on DNSSEC

# DoH/DoT VS. DNSSEC?

We provide Public DoH/DoT for DNS privacy, to avoid interference from third party network and DNS hijacking

- Provide SDK for APP developers to enable the app do the DNS in application level

Requirement on accurate Geolocation, avoid DNS hijacking, very short propagation time, gated launch etc.

**Note: DOH/DOT is a not replacement of DNSSEC , although they have similarity function against DNS hijack**

# Some Thoughts during DNSSEC deployment

## Factors of a successful DNS technology and adoption

- To meet real market demand and creating more customer value
- To fit the evolution of Infrastructure Technology  
ADD, Edge Computing, IoT, Mixed network scenarios
- To Internet governance policy enforcement  
Privacy, encrypted DNS. etc

# Experience and Takeaway

- Good understanding of DNSSEC and your users' requirement
- There are similarity between DoH/DoT and DNSSEC, but they fit different purpose and chosen by different customers
- Follow and test the Best Practice of DNSSEC which fits your situation
- Full preparation for DNSSEC operation as a business
  - DNSSEC implementation in large scale
  - Integration with your existing infrastructure
  - Full experiments and tests if not ready
  - SLA and expected traffic load
  - Failure over solution
  - Help Docs and Customer Service for DNSSEC
